

Goals and Objectives

Obstetrics

By the end of the rotation, the student should be able to:

1. Write thorough H&Ps on all labor patients, including assessments and plans
2. Obtain and write new OB clinic visit H&Ps
3. Assess return OB patients, and know routine screening tests needed at the different gestational ages
4. Perform (4) Leopold maneuvers
5. Describe the (7) cardinal movements of labor
6. Plot Friedman curves on laboring patients
7. Describe the stages of labor
8. Describe effacement and station
9. Describe (3) classic signs of placental separation
10. Describe the (4) types of vaginal lacerations after delivery
11. Define failure to progress/protraction or arrest of labor
12. Define prolonged latent phase
13. Define prolonged active phase
14. Describe the difference between internal and external monitors
15. Describe and read a fetal heart tracing
16. Describe the (3) types of decelerations and their significance
17. Describe how to manage a patient with fetal heart decelerations
18. Describe the factors that predispose to uterine atony
19. Define postpartum hemorrhage
20. Define White's classification of diabetes in pregnancy
21. Define preeclampsia, eclampsia and HELLP syndrome
22. Define chorioamnionitis
23. Define preterm labor and how to treat
24. Give a differential diagnosis of vaginal bleeding in pregnancy, in different trimesters
25. Define placenta previa
26. Define placental abruption
