The Medical Center Dean Seminar Series Presents:

“Malaria aminopeptidases: potential targets for new anti-malarial drugs”

John Dalton, Ph.D.

Professor, Institute of Parasitology
McGill University

**Wednesday, October 14, 2009
12:00-1:00 PM**

**2300 Eye Street NW Ross Hall Room 101
Washington DC, 20037**

PLEASE NOTE: Room Change to Ross 101!!

Dr. Dalton is a Full Professor at McGill University in Montreal, Canada. His main areas of interest are discovery of new classes of anti-malarial drugs; structure, function and phylogenetics of helminth (worm) parasite proteases and their role in virulence, and the pathogenesis and mechanisms of immunomodulation. Dr. Dalton earned his Ph.D. from University College Dublin, and completed his postdoctoral fellowship at Johns Hopkins School of Medicine.

Light lunch will be provided

Additional information and RSVP at 202-994-3532 or mtmmtm@gwumc.edu
